

Beds, Support Surfaces Detailed Written Order Prior to Delivery

Patient Name: Account #: Height: Face Sheet/Demographics Faxed	Order Date <p style="text-align: right;">Chart Notes Attached (Chart notes must include the need for the equipment being ordered)</p>
Patient DOB: Weight:	

I, the Physician, have treated this patient for a condition that supports the need and have discussed the need for this medical equipment with the patient and caregivers. I have documented the following information and the need for this equipment in the patient's most recent chart notes. **Date of visit prior to order:**

DIAGNOSIS (Check appropriate diagnosis below)	Length of Need in Months	(99 = Lifetime)
<input type="checkbox"/> CHF	<input type="checkbox"/> Emphysema	<input type="checkbox"/> Pneumonia
<input type="checkbox"/> COPD	<input type="checkbox"/> Hemiplegia	<input type="checkbox"/> Quadriplegia
<input type="checkbox"/> CVA	<input type="checkbox"/> Paraplegia	<input type="checkbox"/> Rheumatoid Arthritis
<input type="checkbox"/> Decubitus Ulcer - Location:	Stage:	
<input type="checkbox"/> Other:	<input type="checkbox"/> Other:	

HOSPITAL BED (Check all that apply)		
<input type="checkbox"/> Semi-electric (E0260)	<input type="checkbox"/>	Patient requires frequent changes in body position and/or has an immediate need for a change in body position, AND
	<input type="checkbox"/>	Patient has a medical condition which requires positioning of the body in ways not feasible with an ordinary bed. Elevation of the head/upper body less than 30 degrees does not usually require the use of a hospital bed, OR
<input type="checkbox"/> Heavy Duty Full-Electric (E0303) (351 lbs +)	<input type="checkbox"/>	Patient requires positioning of the body in ways not feasible with an ordinary bed to alleviate pain, OR
	<input type="checkbox"/>	Patient requires the head of the bed to be elevated more than 30 degrees a majority of the time due to congestive heart failure, chronic pulmonary disease or problems with aspiration, OR
	<input type="checkbox"/>	Patient requires traction equipment which can only be attached to a hospital bed.

ACCESSORIES Patient must meet at least one of the following criteria to qualify. (Check all that apply)		
<input type="checkbox"/> Bedside Commode/Drop Arm Commode	<input type="checkbox"/>	Patient's mobility and/or tolerance to walk from bed to bathroom is limited.
<input type="checkbox"/> Heavy Duty Bedside Commode (301 lbs.+)	<input type="checkbox"/>	Patient is incapable of utilizing regular toilet facilities (confined to an area of the home that has no toilet facility)
<input type="checkbox"/> Trapeze	<input type="checkbox"/> Bariatric Trapeze	<input type="checkbox"/> Patient Lift

SUPPORT SURFACES (Check all that apply)		
<input type="checkbox"/> Group 1 Gel Overlay (E0185)	<input type="checkbox"/>	Patient is completely immobile OR
	<input type="checkbox"/>	Ulcer(s) on trunk or pelvis AND/OR
	<input type="checkbox"/>	Partially immobile AND ONE OF THE FOLLOWING:
<input type="checkbox"/> Group 1 Alternating Pressure Pad & Pump (E0181)	<input type="checkbox"/>	Fecal or urinary incontinence
	<input type="checkbox"/>	Altered sensory perception
	<input type="checkbox"/>	Compromised circulatory status
	<input type="checkbox"/>	Impaired nutritional status
<input type="checkbox"/> Group 2 Low Air Loss (E0277)	<input type="checkbox"/>	Multiple Stage 2 pressure ulcers located on the trunk or pelvis AND patient has been on a comprehensive ulcer treatment program for at least the past month with group 1 support surface and the ulcers have worsened or remained the same over the past month or
	<input type="checkbox"/>	Large or multiple Stage 3 or 4 pressure ulcer(s) on the trunk or pelvis or
	<input type="checkbox"/>	Recent myocutaneous flap or skin graft for a pressure ulcer on the trunk or pelvis (surgery within the past 60 days) AND
	<input type="checkbox"/>	The patient has been on a group 2 or 3 support surface immediately prior to recent discharge from a hospital or nursing facility (discharge within the past 30 days)

Prescribing Physician's Information	
Name & Credentials	NPI #
Telephone	Fax
Signature	Signature Date

(Stamped signature not accepted)

If filled out completely, this form serves as the Detailed Written Order (DWO) and proof that patient was seen by the physician within 6 month prior to the date of order. This must be received by supplier before equipment is dispensed. A semi-electric hospital bed is covered if ONE OR MORE of the four following criteria are met AND the beneficiary requires frequent changes in body position and/or has an immediate need for a change in body position.

1. The beneficiary has a medical condition which requires positioning of the body in ways not feasible with an ordinary bed. Elevation of the head/upper body less than 30 degrees does not usually require the use of a hospital bed, **or**
2. The beneficiary requires positioning of the body in ways not feasible with an ordinary bed in order to alleviate pain, **or**
3. The beneficiary requires the head of the bed to be elevated more than 30 degrees most of the time due to congestive heart failure, chronic pulmonary disease, or problems with aspiration, **or**
4. The beneficiary requires traction equipment, which can only be attached to a hospital bed.

When ordering a bariatric hospital bed (E0303) the patient must exceed 350lbs as well as meet one of the criteria listed above.

A group 1 mattress overlay or mattress is covered if one of the following criteria are met:

The beneficiary is completely immobile, **or**

The beneficiary has limited mobility and cannot independently make changes in body position significant enough to alleviate pressure and at least one of conditions A-D below, **or**

The beneficiary has any stage pressure ulcer on the trunk or pelvis and at least one of conditions A-D below.

Conditions for criteria 2 and 3, in each case the medical record must document the severity of the condition sufficiently to demonstrate the reasonable and necessary need for a pressure reducing support surface:

- A. Impaired nutritional status B. Fecal or urinary incontinence C. Altered sensory perception D. Compromised circulatory status

Additional Clinical Information:

A beneficiary needing a pressure reducing support surface should have a care plan established by the physician or home care nurse, which is generally documented with the following.

1. Education of the beneficiary and caregiver on the prevention and/or management of pressure ulcers.
2. Regular assessment by a nurse, physician, or other licensed health-care practitioner.
3. Appropriate turning and positioning.
4. Appropriate wound care (for a stage II, III, or IV ulcer).
5. Appropriate management of moisture/incontinence.
6. Nutritional assessment and intervention consistent with the overall plan of care.

A group 2 support surface is covered if the patient meets:

Criterion 1 and 2 and 3, **or** B. Criterion 4, **or** C. Criterion 5 and 6

1. The patient has multiple stage II pressure ulcers located on the trunk or pelvis, and
2. Patient has been on a comprehensive ulcer treatment program for at least the past month which has included the use of an appropriate group 1 support surface, and
3. The ulcers have worsened or remained the same over the past month, or
4. The patient has large or multiple stage III or IV pressure ulcer(s) on the trunk or pelvis, or
5. The patient had a recent myocutaneous flap or skin graft for a pressure ulcer on the trunk or pelvis (surgery within the past 60 days) , and
6. The patient has been on a group 2 or 3 support surface immediately prior to a recent discharge from a hospital or nursing facility (discharge within the past 30 days).

The comprehensive ulcer treatment described in #2 above should generally include:

- a) Education of the patient and caregiver on the prevention and/or management of pressure ulcers.
- b) Regular assessment by a nurse, physician, or other licensed healthcare practitioner (usually at least weekly for a patient with a stage III or IV ulcer).
- c) Appropriate turning and positioning.
- d) Appropriate wound care (for a stage II, III, or IV ulcer).
- e) Appropriate management of moisture/incontinence.
- f) Nutritional assessment and intervention consistent with the overall plan of care.

If the patient is on a group 2 surface, there should be a care plan established by the physician or home care nurse which includes the above elements. The support surface provided for the patient should be one in which the patient does not "bottom out" (see Appendices section).When a group 2 surface is covered following a myocutaneous flap or skin graft, coverage generally is limited to 60 days from the date of surgery.

A commode is covered when the beneficiary is physically incapable of utilizing regular toilet facilities. This would occur in the following situations:

1. The beneficiary is confined to a single room, **or**
2. The beneficiary is confined to one level of the home environment and there is no toilet on that level, **or**
3. The beneficiary is confined to the home and there are no toilet facilities in the home.
4. An extra wide/heavy duty commode chair (E0168) is covered for a beneficiary who weighs 300 pounds or more.

Medicare requires that it is a physician (MD, DO, or DPM), physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS) perform the office visit examination with the beneficiary. The chart note from the office visit exam must be signed and dated by the author of the note. If completed by a PA, NP, or CNS, the physician (MD, DO or DPM) must cosign and date the note.
